

WOLLONGONG'S NATIVE TREES is a book about the 150 odd trees indigenous to Wollongong. However, most of the trees described in the book also grow extensively along the east coast, some all the way to Cairns and some all the way to Victoria.

The book was first published in 1980 and has been largely unchanged till now. This edition is a complete revision and includes an additional 25 species. Some of these have been discovered in the area since 1980; others have been raised from shrub to tree status or have been created from classification changes. There are also many changes as a result of new information becoming available from various people and authorities.

Whether you need to identify a tree in the wild, in your garden or increase your knowledge about these trees, this book is invaluable. With over 700 photographs, 200 maps and drawings and a wealth of written details, you can enjoy a completely new look at the flora of this diverse region.

For thirty years this book has been used widely as a reference book and field guide and remains the most useful book on Wollongong's native trees.

Wollongong's Native Trees can be obtained by any of the methods below:
